

Aakash Auto Hub - PRD

Product Requirements Document (PRD)

Aakash Auto Hub — Bus & Car AC Parts Catalog Website

Version: 1.0 **Date:** July 18, 2026 **Prepared for:** Aakash Auto Hub (Indore, Madhya Pradesh) **Platform:** Django (Full Stack) + Custom Admin Panel

1. Overview

Aakash Auto Hub needs a professional, catalog-style website to showcase Bus & Car AC spare parts. The website will **not sell products online or show prices** — instead, it acts as a digital product catalog. When a customer finds a part they need, one click sends them straight to WhatsApp with a pre-filled enquiry message, where the actual conversation, pricing, and order happens directly with the shop owner.

The owner will have a full-featured, attractive admin panel to manage categories, products, images, business info, and social media links — without needing any technical/coding knowledge.

2. Goals & Objectives

Goal	Description
Digital Catalog	Give customers/mechanics an easy way to browse and search AC parts by category
Lead Generation	Convert product interest directly into a WhatsApp conversation (no cart, no checkout, no price display)
Owner Control	Owner should be able to add/edit/delete categories & products, update business info, and manage everything via a clean admin panel
Brand Presence	Strong, professional visual identity using the existing Aakash Auto Hub logo, colors (navy blue, black, gold/yellow accents), and branding
Trust Building	Highlight genuine parts, expert service, fast delivery, and easy contact options (Call/WhatsApp)

3. Target Users

- Customers / Mechanics / Bus Operators** — searching for specific AC spare parts (compressor, condenser fan, blower motor, etc.)
- Shop Owner (Admin)** — Aakash Auto Hub owner, who manages the catalog and receives enquiries.

4. Tech Stack

Layer	Technology
Backend Framework	Django (Python)
Admin Panel	Django Admin — customized (via <code>django-jazzmin</code> or custom-built admin UI for a modern look, not default Django admin styling)
Database	PostgreSQL (recommended) or SQLite for smaller scale
Frontend	Django Templates + Tailwind CSS (or Bootstrap 5) for a custom, non-AI-generated, professional design
Image Handling	Django ImageField + Pillow, with image compression for fast load
Hosting Recommendation	Any Django-compatible host (Railway, Render, PythonAnywhere, or VPS)
Search	Django ORM search (<code>icontains</code>) initially; can upgrade to full-text search later

5. Information Architecture (Site Structure)

```
Home
├─ Header (Logo, Business Name, Call/WhatsApp button, Nav)
├─ Hero/Banner Section (Free Delivery, Tagline, CTA)
├─ Search Bar
├─ Category Grid (icon + name, 2–3 columns on mobile, more on desktop)
├─ Featured/New Parts (optional section)
├─ Why Choose Us (Genuine Parts / Best Price / Expert Service / Fast Delivery)
└─ Footer (Business Info, Address, Contact, Social Links, Quick Category Links)

Category Page
└─ Grid of all products under that category (image + name only, no price)

Product Detail Page
├─ Product Photo (with zoom / gallery if multiple images)
├─ Product Name
├─ Part Number (OEM)
├─ Full Description
├─ Compatible Bus/Vehicle Models
├─ Alternative/Compatible Parts (linked products)
├─ Category Tag
└─ "Enquire on WhatsApp" button (primary CTA) + "Call Now" button

Search Results Page
└─ Filtered product grid based on search query

Static Pages
├─ About Us
├─ Contact Us (Map, Address, Phone, WhatsApp, Email, Social Icons)
└─ (Optional) Terms/Privacy – minimal, since no online transactions happen
```

6. Core Features — Customer Facing

6.1 Homepage

- Attractive hero banner using brand colors (navy blue/black/gold) — reflecting the uploaded logo and poster style
- Prominent search bar: “🔍 Search Bus AC Parts”
- Category grid displayed as icon/image cards (by **part type**, not by brand) — see Section 9
- “Why Choose Us” strip: Genuine Parts | Best Price | Expert Service | Fast Delivery (matches existing poster design)
- Sticky/floating WhatsApp button visible on all pages

6.2 Category Page

- Grid/list of all products in the selected category
- Each card shows: product image + product name only (**no price**)
- Sub-category filter if needed (e.g., under “Compressor” → Sanden, Valeo, Denso, Bitzer)

6.3 Product Detail Page

Each product will display: - 🖼️ Product Photo (multiple images supported — gallery/carousel) - 🏷️ Product Name - 📏 Part Number (OEM) - 📄 Full Description (specifications, material, usage notes) - 🚗 Compatible Bus/Vehicle Models (tags or list) - 🔗 Alternative/Related Parts (linked to other products) - 📁 Category & Sub-category - 💬 “**Enquire on WhatsApp**” button — opens WhatsApp with a **pre-filled message**: > “Hi, I’m interested in [Product Name] (Part No: [XXX]). Please share more details and price.” - ☎️ “**Call Now**” button (click-to-call on mobile) - ✖️ **No price shown anywhere**

6.4 Search

- Search by product name, part number, or category
- Auto-suggest / instant results (optional enhancement)

6.5 Header (Global)

- Logo (left)
- Business name + tagline (“Bus & Car AC Parts Specialist”)
- Navigation: Home | Categories | About | Contact
- Call/WhatsApp number visible at all times (top bar or header)

6.6 Footer (Global)

- Business logo + short description
- Full address (Indore, Madhya Pradesh)
- Contact: Phone / WhatsApp / Email
- Social Media icons: Instagram, Facebook (and any others owner provides)
- Quick links: Popular categories
- “Genuine Parts | Best Price | Expert Service | Fast Delivery” trust badges
- Copyright line

7. Core Features — Admin Panel (Owner Control)

The admin panel should be **attractive and easy to use** (not default plain Django admin) — using a themed admin UI (e.g., Jazzmin, or a fully custom dashboard) with the business logo/branding applied.

7.1 Dashboard

- Quick stats: Total Products, Total Categories, Recently Added Products
- Quick-add buttons for Product / Category

7.2 Category Management

- Add / Edit / Delete categories & sub-categories
- Upload category icon/image
- Reorder categories (drag-drop or priority number)
- Enable/Disable a category (hide from site without deleting)

7.3 Product Management

- Add / Edit / Delete products
- Fields: Name, Part Number, Description, Category, Sub-category, Compatible Models, Alternative Parts (many-to-many link), Multiple Images, Status (Active/Inactive), Featured (Yes/No)
- Bulk upload option (optional enhancement — CSV import)
- Image upload with auto-compression/resizing

7.4 Business Info Management

- Business Name, Tagline, Logo, About text
- Phone Number(s) — Call & WhatsApp
- WhatsApp default message template (editable by owner)
- Address, Map link
- Social Media links: Instagram, Facebook, YouTube (optional)
- Working hours (optional)

7.5 Enquiry Tracking (Optional but Recommended)

- Every time a customer clicks “Enquire on WhatsApp,” log the product + timestamp (no personal data needed) so owner can see **which products get the most interest** — helps with stock/business decisions.

7.6 User Access

- Single admin login (owner) to start; role-based access (staff accounts) can be added later if owner hires help

8. Data Model (High-Level)

Category - name, slug, icon/image, parent_category (self-FK for sub-categories), display_order, is_active

Product - name, slug, part_number, description, category (FK), sub_category (FK), compatible_models (text/tags), alternative_parts (M2M to self), is_active, is_featured, created_at

ProductImage - product (FK), image, is_primary

BusinessInfo (singleton model) - business_name, tagline, logo, about_text, phone_number, whatsapp_number, whatsapp_message_template, address, map_embed_link, instagram_url, facebook_url, other_social_links

EnquiryLog (optional) - product (FK), clicked_at, source (WhatsApp/Call)

9. Category List (By Part Type — Finalized Structure)

Based on your suggestion, categories will be organized by **part type**, with relevant sub-categories/brands nested inside:

- **Compressor** → Sanden / Valeo / Denso / Bitzer / Compressor Clutch / Magnetic Coil / Pulley
- **Condenser** → Condenser Coil / Condenser Fan / Fan Motor / Condenser Bracket
- **Evaporator** → Evaporator Coil / Expansion Valve / Temperature Sensor / Drain Pipe
- **Blower** → Blower Motor / Blower Wheel / Blower Housing / Resistor
- **Electrical** → Wiring Harness / AC Relay / Fuse / Pressure Switch / Solenoid Valve
- **AC Controls** → AC Display / Control Panel / Thermostat
- **Hoses & Fittings** → AC Hose Pipe / Fittings & Connectors / Service Valve
- **Filters** → Filter / Cabin Filter / Dryer Filter
- **Sensors** → Temperature Sensor
- **Refrigerant & Oil** → Refrigerant (R134a), O-Ring Kit, Sight Glass
- **Belts & Pulleys** → AC V-Belt / Idler Pulley / Tensioner
- **Ducting & Vents** → Duct / Vent Louvers / Rubber Mount

(Final list to be confirmed with owner; structure is flexible in admin panel — owner can add/remove/reorder anytime.)

10. UI/UX Requirements

- **No generic AI-template look** — custom design reflecting the existing brand poster (navy blue + black + gold/yellow accents, bold bus/truck imagery)
- Use the provided **logo** as the primary brand mark in header, footer, and favicon
- Fully **mobile-responsive** (majority of customers will browse via mobile/WhatsApp)
- Fast-loading images (compressed, lazy-loaded)
- Clean typography — bold, industrial/automotive feel (matches existing poster's bold font style)
- Category cards with icons/images — visually distinct, easy to tap
- Sticky WhatsApp floating button on all pages for quick contact

- Clear visual hierarchy on product page: Image → Name → Part No. → Description → CTA buttons

11. WhatsApp Integration Flow

1. Customer clicks **“Enquire on WhatsApp”** on a product page
2. Link format: `https://wa.me/91XXXXXXXXX?text=<pre-filled message>`
3. Message auto-includes: Product Name + Part Number + Page link (optional)
4. Owner receives message directly on their business WhatsApp
5. Owner continues the conversation (price, availability, delivery) manually

Owner can edit the message template anytime from the admin panel.

12. Non-Functional Requirements

- **Performance:** Pages should load under 3 seconds on 4G
- **SEO:** Proper meta titles/descriptions, image alt text, clean URLs (slugs) — helps customers find the shop via Google search for part names
- **Security:** Admin panel protected with strong login; CSRF protection (Django default)
- **Scalability:** Should support 500+ products without performance issues
- **Backup:** Regular database backups recommended once live

13. Out of Scope (For This Version)

- Online payment / cart / checkout system
- Price display anywhere on the site
- Customer login/registration (not needed — pure catalog + WhatsApp model)
- Order tracking / invoicing

14. Success Metrics

- Number of WhatsApp enquiries generated per week/month
- Most-viewed / most-enquired products (via Enquiry Log)
- Search terms customers use (helps identify missing inventory/categories)
- Overall site traffic (Google Analytics integration recommended)

15. Assets Needed From Owner

- ✓ Logo (already provided)
- Business address, working hours
- WhatsApp number(s) for enquiries
- Instagram & Facebook page links
- Product photos + part numbers + descriptions for initial catalog upload
- Any existing brand colors/fonts preference (if different from current poster)

16. Suggested Enhancements (Optional, Future Phase)

- Multi-language toggle (Hindi/English) since many customers may prefer Hindi
- “Request a Part” form for parts not listed in catalog
- Google Reviews / testimonials section

- Blog/tips section (e.g., “How to identify a faulty AC compressor”) — good for SEO
 - WhatsApp Business API integration for automated replies (later stage)
-

Next Step: Once you confirm/edit this PRD, development can proceed in phases: **Phase 1** — Django project setup + Data models + Admin panel **Phase 2** — Frontend templates (Home, Category, Product, Search) **Phase 3** — WhatsApp integration + Header/Footer + Business Info **Phase 4** — Testing, content upload, deployment
